

List of Known Bugs
Last Updated Nov 22

- Small grammar issue. Eg, "Apples is healthier than bananas" should say "Apples are healthier than bananas"
- Algorithm is not accurate because our algorithm needs to take this into account, so that things with a lot of protein, but a lot of other bad things don't win out against food with lots of other good things, but not a lot of protein. (for example) I think the weights should approach 0 as the amount approaches the daily limit?
- When a user updates their password, the format is not checked
- Errors when input valid queries eg. "bok-choy"
